Regulation of Natural Products – a GA eSeminar series

The regulation of natural products is a global challenge, given the multitude of regulatory pathways and different approaches globally. Therefore, GA, the Society for Medicinal Plants and Natural Product research, steps in a series of lectures on Regulatory Affairs for (traditional) herbal medicinal products, herbal food supplements (so called botanicals), and substance-based medical devices, with leading experts from industry, authorities and academia worldwide as lecturers. The aim is to help in differentiating the different market niches for herbal products in the countries of this world and to reveal pros and cons of the categories.

Part A of the eSeminar series, with four issues, will give a general overview, while Part B, starting in early 2022, will be on the regulatory approaches in different countries worldwide.
